

A · Bottles with concentration (chosen: tag in the title). Sample math is wrong: carbs come from each product's label, not powder grams.

Bottles · A: concentration in the title

A blue tag on each bottle: "7.5% · 62 g carbs". Duplicate baggies for the same stop become one row ("2 baggies for stop 1").

Bottles · B: concentration as the last line

A bold last line under each recipe: "Concentration ··· 7.5% · 62 g carbs".

Strength override

auto %

First gel at

20 min

Why the strength stops at 8%

Heat: lower carb target ~15%

In the heat, 10–20% less of the carbohydrate you drink gets used.

RESEARCH

Jentjens et al., 2002

Mougin et al., 2025

I KNOW WHAT I LIKE

My setup:

your carb bottles and the grams of carbs in each. The plan solves the gels around them to hit your carb target. Changing a number pins it.
