

A · Upcoming collapses while planning (count + "planning" tag; no grey lines)

After "Plan it"

The workout jumps into the calculator (bar on top). Upcoming collapses to one line: "UPCOMING · 2" with a green "planning Sat 10" tag. No grey text.

CancelConcentrationDone

The most fred will mix in a bottle, by heat stress (temperature, humidity, sun). Humid or sunny days count as hotter.

Cold

low heat stress
≈ under 55°F, dry

–

8%

+

Moderate

medium
≈ 55–80°F, dry

–

6%

+

Hot

high heat stress
≈ over 80°F, or mid-70s humid

–

3%

+

Back to fred's defaults (8 · 6 · 3)

2 / 3 · fred round · 2026-10-06 v2

C · Sweat grid for reference: rows become Cold · Moderate · Hot by heat stress (same bands as B)

A · 3 × 3 grid (recommended)

Weather down the side, effort across the top. Pick Light / Normal / Heavy to fill it, then tap any box to make it yours. Blue boxes are yours; grey are auto.

fred | Settings

M

FUELING

Sweat rate

Done

Start from

Light

Normal

Heavy

Custom

oz per hour

	Recovery	Steady	Hard
Cold under 50°F	14 auto	18 auto	20 yours
Mild 50–75°F	18 auto	24 auto	28 auto
Hot over 75°F	24 auto	34 yours	38 auto

Tap any box to set your own. Blue = yours (kept as is). Grey = auto from your choice above. Between bands fred blends smoothly (e.g. 72°F sits between Mild and Hot). Your fluid limits still apply.

How to measure it

A · tapping a box

Edit just that box with – / +; it shows what auto would be, and "Back to auto".

fred | Settings

M

FUELING

Sweat rate · Hot · Steady

Done

	Recovery	Steady	Hard
Cold under 50°F	14 auto	18 auto	20 yours
Mild 50–75°F	18 auto	24 auto	28 auto
Hot over 75°F	24 auto	34 yours	38 auto

Hot · Steady

auto would be 32

–

34

+

Back to auto

B · fewer numbers

Your mild-weather rate per effort, plus one % per weather band. Simpler, less exact.
